Our team will continue to build out useful resources and release them over time. How does AI auto-tagging work? AI auto-tagging is a feature utilized by Digital Asset Management (DAM) platforms to help users save time by eliminating manual work, encouraging organization, and making files easy to locate. The technology works by analyzing objects within an image and generating a set of tags returned from a machine learning system. Based on a confidence score, the tags with the highest likelihood of accuracy will be applied to the image. When used within a DAM, tags provide a convenient method to search by. How does the color palette generator work? The Workbench color palette generator extracts a series of HEX colors from an image upon upload. It counts every pixel and its color, and generates a palette of up to 6 HEX codes of the most recurring colors. What is metadata? Metadata provides information about an asset's content. For example, an image may include metadata that describes how large the picture is, the color depth, the image resolution, the creation date, and other data. A text document's metadata may include information about length of document, the author, publish date, and a short summary of the document. What is Digital Asset Management? Digital Asset Management (DAM) has, in recent years, become a critical system for companies of all industries and sizes. A DAM is a software platform brands use to store, edit, distribute and track their brand assets. DAMs are intended to encourage the organization of a company's digital architecture, eliminating the use of buried files and folders typically housed in Google Drive or Dropbox. DAM systems scale to store massive quantities of digital assets, including but not limited to: photos, audio files, graphics, logos, colors, animations, 3D video, PDF files, fonts, etc. In addition to meticulous organization within the DAM's central file system, these files are discoverable using unique identifiers such as their metadata and tags (auto and manual). When used for distribution, DAMs encourage asset permissioning and expiration, ensuring only the correct content is available to the correct recipient for a specified amount of time. Once published or distributed, DAMs can analyze how, where and by whom assets are being used. Digital asset management platforms are used by marketing, sales and creative teams at some of the world's largest brands. Want to learn more about how a DAM could benefit your team? There are built-in clip art images for just about every topic, so you may be able to find a perfect clip art image for your document. If you have a more specific image in mind, you can insert a picture from a file. In this lesson, you will learn how to search for and insert clip art, how to insert an image from a file, and how to change the text wrapping settings for your images. Inserting clip art and pictures Adding clip art and pictures to your document can be a great way to illustrate important information or add decorative accents to existing text. You can insert images from your computer or search Microsoft's extensive selection of clip art to find the image you need. Once an image has been inserted, you can format text to wrap around the image. Select the Insert tab. Click the Clip Art command in the Illustrations group. The Clip Art command The clip art options appear in the task pane to the right of the document. Enter keywords in the Search for: field that are related to the image you want to insert. Click the drop-down arrow in the Results should be: field. Deselect any types of media you do not want to see. Choosing which media types to display If you also want to search for clip art on Office.com, place a check mark next to Include Office.com content. Otherwise, it will just search for clip art on your computer. Including Office.com content Click Go. Review the results from a clip art search. Place your insertion point in the document where you want to insert the clip art. Click an image in the Clip Art pane. It will appear in the document. Selecting a Clip Art image You can also click the drop-down arrow next to the image in the Clip Art pane to view more options. To insert a picture from a file: Place your insertion point where you want the image to appear. Select the Insert tab. Click the Picture command in the Illustrations group. The Insert Picture dialog box appears. Inserting a picture from a file Select the desired image file, then click Insert to add it to your document. Selecting an image file To resize an image, click and drag one of the corner sizing handles. The image will change size while keeping the same proportions. If you want to stretch it horizontally or vertically, you can use the side sizing handles. Changing text wrapping settings When you insert clip art or a picture from a file, you may notice that it's difficult to move it exactly where you want. This is because the text wrapping for the image is set to In Line with Text. You'll need to change the text wrapping setting if you want to move the image freely, or if you just want the text to wrap around the image in a more natural way. To wrap text around an image: Select the image. The Format tab will appear. Click the Format tab. Click the Wrap Text command in the Arrange group. Select the desired menu option. The text will adjust based on the option you have selected. Choosing a text wrapping setting Move the image around to see how the text wraps for each setting. If you can't get your text to wrap the way you want, click the Wrap Text command, then select More Layout Options from the menu. You can make more precise changes in the Advanced Layout dialog box that appears. To use a predefined text wrapping setting: Click the Position command to the left of the Wrap Text command. A drop-down menu will appear. From the drop-down menu, select the desired image position. Choosing an image position The image will move to the position you have selected, and it will automatically have text wrapping applied to it. Challenge! Create a new Word document. Insert a clip art image. Insert a picture from a file into the document. Resize the picture. Change the text wrapping setting to In Front of Text. /en/word2010/formatting-pictures/content/
